ENSURING THE EXPERTISE TO GROW SOUTH AFRICA

GUIDELINE SCOPE OF SERVICES AND PROFESSIONAL FEES

[Scope of Services and Professional Fees for Persons Registered in terms of the Engineering Profession Act, 46 of 2000]

R-01-GFF

REVISION 1: Consultation Draft
Guideline Scope of Services and Professional Fees  
(Scope of Services and Tariff of Fees for Persons Registered in terms of the Engineering Profession Act, 46 of 2000) 

The Engineering Council of South Africa has, under Section 34(2) of the Engineering Profession Act. 2000 (Act No. 46 of 2000), determined the guideline scope of services and professional fees as set out in this document.

Any amount mentioned in or fee calculated in terms of this Guideline Scope of Services and Professional Fees is exclusive of Value Added Tax.

The commencement date of this Guideline Scope of Services and Professional Fees shall be.............

GUIDELINE SCOPE OF SERVICES AND PROFESSIONAL FEES

1 PREAMBLE AND DEFINITIONS

1.1 PREAMBLE

This Guideline Scope of Services and Professional Fees provides tables of fees that serve as a guideline for determining fees to be paid for engineering services that are fair and equitable to all parties. The Guideline allows for four different methods of remuneration namely:

1. percentage fees based on the cost of works
2. fees for services that are additional to those provided for in the normal percentage fee-based calculation
3. time-based fees
4. reimbursable expenses.

Where the scope of work is uncertain remuneration will primarily be based on time and reimbursable expenses.

Where the location, size, character, form and function of the works have been defined through previous studies and investigations that have either formed part of the client's normal business practices or have been the subject of previous separate appointments paid for on a time and cost basis, the remuneration can be determined using the guideline fee tables that are based on the cost of the works. Percentage based fees provide a convenient way to express the fee payable if the scope of work is somewhat uncertain. The typical range of percentage fees applicable to different size projects and services provided is shown in the graph below.
The graph shows that percentage-based fees can range from 6% for a large project up to 20.5% for a small project. The graph is provided to demonstrate how the fee can vary over a broad range and must not be used to try to determine an actual fee percentage. The fee can also fall outside the band depending on the complexity factors that are expanded upon in clause 4. These factors are normally converted into multipliers that range from 0.25 to 1.5 and are applied to modify the overall percentage fee and agree on a fair and reasonable fee for the services to be provided.

Once the client and consulting engineer have come to a mutually acceptable agreement on the appropriate fee and the scope of services, and the scope of work is clearly defined, then the client and consulting engineer should agree on commercial terms that set out the timing of deliverables and related payments as well as the method of payment that seeks to balance service provider cash flow and client risk.

This guideline is not prescriptive but has been produced as an aid to assist a client and the consulting engineer in reaching an equitable agreement on fees for services offered.
1.2 DEFINITIONS

In this Guideline Scope of Services and Professional Fees any word or expression defined in the Act has that meaning, and, unless the context otherwise indicates:

1.2.1 **Authority** means any statutory body or organ of the State established in terms of any legislation, regulations or bylaws in South Africa, including local, provincial and national government departments and public authorities and who have legislated authority over the project or site. In the context of this Guideline, authority does not include any private entity such as an insurer unless specified in writing in the Agreement.

1.2.2 **Building Project or Multi-Disciplinary Project** means a project comprising building work or multi-disciplinary work, together with its associated engineering work, where the engineer may be subject to the authority of another professional acting as the Principal Agent while financial and administrative matters may be dealt with by another professional, and where the engineer is only paid a fee based on the costs of a portion of works.

1.2.3 **Client** means any juristic person, entity, or organ of the State who enters into an agreement with a consulting engineer for the performance of services on a project. Depending on the form of agreement applicable, the term “employer” has the same meaning as “client”.

1.2.4 **Consulting Engineer or Consultant**, for the purposes of these rules only, means any professional person registered in terms of the Act, or a juristic person or entity who employs such professional person or persons, who enters into an agreement with a client for the performance of services on a project.

1.2.5 **Construction Monitoring** means the process of administering the construction contract and over-seeing and/or inspecting the works, to the extent of the Agreement, for the purpose of determining whether the works are being completed in accordance with the requirements of the contract, that the consulting engineer’s designs are being correctly interpreted and that appropriate construction techniques are being utilised. Construction monitoring, to whatever extent, does not diminish the contractor’s responsibility for executing and completing the works in accordance with his contract.

1.2.6 **Contractor** means any person or a juristic person under contract to a client to perform the works or part of it on a project, including a subcontractor under contract to such contractor.
1.2.7 **Cost of the Works** means the total final amount (or a fair estimate thereof), exclusive of value added tax, certified or which would, normally, be certifiable for payment to Contractors (irrespective of who actually carries out the works) in respect of the works designed, specified or administered by the consulting engineer, before deduction of liquidated damages or penalties, including the following:

1. Escalation, assuming continuity of the project through to final completion. Where delays occur in the project cycle the client and consultant should come to an agreement on the escalation that will be applicable to various stages of services.

2. A pro-rata portion of all costs related to the Contractor’s general obligations and overhead (preliminary and general) items, including contractor’s profit, applicable to the works (irrespective of who actually carries out the works).

3. The costs of new materials, goods or equipment, or a fair evaluation of such material, goods or equipment as if new, whether supplied new or otherwise by or to the client and including the cost or a fair evaluation of the cost of installation (the sourcing, inspection and testing of such comprise additional services by the consulting engineer).

1.2.8 **Electronic Engineering Services** means services related to the provision of complex, purpose designed electronic systems and detailing the terminations, signals and interconnections of electronic components as distinct from proprietary designed and commercially available electronic systems and conventional electrical HV, MV and LV systems and related reticulation.

1.2.9 **Engineering Project** means a project of which the scope comprises mainly engineering work.

1.2.10 **Fees and/or tariff of fees** means payment made to a consultant or consulting engineer in exchange for advice or services.

1.2.11 **Normal Services** means the services set out in clause 3.2.

1.2.12 **Principal Consultant** means the consulting engineer or consultant appointed by the client to manage and administer the services of all consultants on a multi-disciplinary project, where more than one professional service provider is appointed.

1.2.13 **Principal Agent** means the entity, person, consulting engineer or consultant named or appointed with full authority and obligation to act in terms of the contract between the client and the consultant.
contractor. Depending on the form of contract applicable, the term “agent”, or “employer’s agent”, or “engineer”, or “project manager” have the same meaning as “principal agent”.

1.2.14 **Project** means any total scheme envisaged by a client, including all the works and services concerned.

1.2.15 **Quality Assurance Plan** is the plan that is put in place that represents the total of the contractor’s quality control processes as well as other inspections and acceptance testing processes and related activities that are associated with assuring the client that the works will meet acceptable standards.

1.2.16 **Scope of Work** means the portion of the works for which the consulting engineer is engaged.

1.2.17 **Scope of Services and/or Services** means the services contemplated in clause 3 on a project for which a consulting engineer is engaged.

1.2.18 **Stage** means a stage of normal services set out in clause 3.2.

1.2.19 **the Act** means the Engineering Profession Act, 46 of 2000.

1.2.20 **Total Annual Cost of Employment** means the total annual cost of employment as defined in clause 4.4.4.

1.2.21 **the Agreement** means the agreement signed by the client and consulting engineer that defines their relationship and obligations as well as the scope of work and services to be provided by the consulting engineer and the remuneration of the consulting engineer and related commercial terms.

1.2.22 **Works** means the activities on a project for which contractors are under contract to the client to perform or are intended to be performed, including the supply of goods and equipment.
2 GENERAL PROVISIONS

2.1 REPEAL AND TRANSITION

2.1.1 Subject to clause 2.1.2, the Scope of Services and Tariff of Fees for Persons Registered in terms of the Engineering Profession Act, 46 of 2000, published under Government Gazette No. 44333, Board Notice 22 of 26 March 2021, is hereby repealed.

2.1.2 The provisions of previous Board Notices including subsequent amendments still apply in respect of services rendered during a stage which has not yet been completed by the date of commencement of this Guideline.

2.2 GENERALITY OF TERMS

In this document, except where the context otherwise requires or indicates:

- the masculine includes the feminine
- the singular includes the plural
- any reference to a natural person includes a juristic person.

2.3 SHORT TITLE

This document is called the Guideline Scope of Services and Professional Fees.
3 GUIDELINE SCOPE OF SERVICES

3.1 SPECIALIST ENGINEERING SERVICES AND STUDIES, AND FEASIBILITY STUDIES

These typical services relate to carrying out planning, studies, investigations, assessments as well as the preparation and submission of reports embodying proposals or feasibility studies and will normally be remunerated on a time and cost basis.

1. Consultation with the client or client's authorised representative.
2. Inspection of the project site.
3. Developing and defining the scope of work where required.
4. Preliminary investigation, route location, planning and a level of design appropriate to allow decisions on feasibility.
5. Assessment of existing infrastructural elements with the view of informing the project on options of how to integrate existing works with proposed new works.
6. Consultation with authorities and other entities having rights or powers of sanction as well as consultation with the public and stakeholder groups.
7. Advice to the client as to regulatory and statutory requirements, including environmental management and the need for surveys, analyses, tests and site or other investigations, as well as approvals, where such are required for the completion of the report, and arranging for these to be carried out at the client's expense.
8. Searching for, obtaining, investigating and collating available data, drawings and plans relating to the works.
9. Where applicable, investigating financial and economic implications relating to the proposals or feasibility studies.
10. Assist the client to develop timeframes for next stages of the project where required.

Deliverables will typically include:

a) collation of information
b) reports on technical and financial feasibility and related implications
c) list of consents and approval
d) schedule of required surveys, tests, analyses, site and other investigations
e) time frames for upcoming deliverables.
3.2 NORMAL SERVICES

3.2.1 Introduction

1. Normal services, as described hereunder, are applicable to projects where the scope of work, the cost, and the timeframe of the project have all been defined through previous investigations and reports in sufficient detail to determine the scope of the services with reasonable accuracy, and the consulting engineering services are required to take the project through to successful completion of construction.

2. In the case where only a single consulting engineer is appointed on a project, the services and deliverables of a principal consultant and/or a principal agent are included as normal services and must be agreed between the parties to see the project through all stages. The services and deliverables of a principal consultant and/or principal agent are only applicable and considered to be additional services where agreed in writing prior to the commencement of any work and as further described in clause 3.3.5 and 3.3.7.

3. Unless otherwise agreed in writing prior to the commencement of any work, part of the normal services of the consulting engineer on all projects includes the provision of services related to all financial matters such as the calculation of quantities, cost estimates, cost control and the procurement process. The only exceptions, where financial services do not form part of the normal services of the consulting engineer are as follows:

   a) Structural and civil engineering services related to building and multi-disciplinary projects, and where such services form part of the quantity surveyor’s scope of services. Where the civil and structural consulting engineer is required to give assistance with such services, these shall be treated as an additional service remunerated on a time and cost basis.

   b) In the case of building and multi-disciplinary projects where the scope of works forms part of the principal building contract (for example a domestic subcontract) and where such financial administration services form part of the quantity surveyor’s scope of services.

Stage 1 – Inception

Defined as: Confirm client requirements and preferences, assess user needs and options, appointment of necessary consultants, finalise the project brief including project objectives, priorities, constraints, assumptions, aspirations and strategies.
1. Assist in finalising a clear project brief.
2. Attend fortnightly project initiation meetings.
3. Advise on procurement policy for the project.
4. Advise on the rights, constraints, consents and approvals.
5. Finalise the scope of services and scope of work required.
6. Conclude the terms of the agreement with the client.
7. Inspect the site and advise on the necessary surveys, analyses, tests and site or other investigations where such information will be required for Stage 2 including the availability and location of infrastructure and services.
8. Determine the availability of data, drawings and plans relating to the project.
9. Advise on criteria that could influence the project life cycle cost significantly.
10. Provide necessary information within the agreed scope of the project to other consultants involved.

Deliverables will typically include:

- a) agreed scope of services and scope of work
- b) signed agreement
- c) report on project, site and functional requirements
- d) schedule of required surveys, tests, analyses, site and other investigations
- e) schedule of consents and approvals and related timeframes.

### 3.2.2 Stage 2 – Concept and Viability (or Preliminary Design)

Defined as: Prepare and finalise the project concept in accordance with the brief, including project scope, scale, character, form and function, plus preliminary programme and viability of the project.

1. Agree the documentation programme with the client, principal agent or principal consultant, and other consultants involved.
2. Attend fortnightly design and consultants' meetings.
3. Establish the concept design criteria.
4. Prepare initial concept design and related documentation.
5. Advise the client regarding further surveys, analyses, tests and investigations that may be required.
6. Establish regulatory authorities’ requirements and incorporate into the design.
7. Refine and assess the concept design to ensure conformance with all regulatory requirements and consents.
8. Establish access, utilities, services and connections required for the design.
9. Coordinate design interfaces with other consultants involved.
10. Prepare process designs (where required), preliminary designs, and related documentation, which are suitable for costing, for approval by authorities and client.
11. Liaise, co-operate and provide necessary information to the client, principal consultant and other consultants involved.

The following financial administration services form part of the normal services except as described in clause 3.2.1.3:

12. Provide cost estimates and life cycle costs, as required.

Deliverables will typically include:

a) concept design
b) schedule of required surveys, tests and other investigations and related reports
c) process design, if applicable
d) preliminary design
e) cost estimates, if part of normal services.

3.2.3 Stage 3 – Design Development (or Detailed Design)

Defined as: Develop the approved concept design to finalise the design, outline specifications, cost plan, financial viability and programme for the project.

1. Review documentation programme with client, principal agent or principal consultant, and other consultants involved.
2. Attend fortnightly design and consultants’ meetings.
3. Incorporate client’s and authorities’ detailed requirements into the design.
4. Incorporate other consultants’ designs and requirements into the design.
5. Prepare design development drawings including draft technical details and specifications.
6. Carry out design reviews and evaluate design and outline specification for quality and cost control.
7. Liaise, co-operate and provide necessary information to the principal consultant and other consultants involved.

8. Submit the necessary design documentation to local and other authorities for approval.

The following financial administration services form part of the normal services except as described in clause 3.2.1.3:

**Deliverables will typically include:**

a) design development drawings
b) outline technical specifications
c) local and other authority submission drawings and reports
d) detailed estimates of construction costs, if part of normal services.

### 3.2.4 Stage 4 – Documentation and Procurement

Defined as: Prepare procurement and construction documentation, confirm and implement the procurement strategies and procedures for effective and timeous procurement of necessary resources for execution of the project.

1. Attend fortnightly design and consultants' meetings.
2. Prepare specifications and preambles for the works.
3. Accommodate services design.
4. Review and adjust designs and documents, if necessary, to remain within budget.
5. Liaise, co-operate and provide necessary information to the client, principal agent, principal consultant and the other consultants as required.
6. Assess samples and products for compliance and design intent.
7. Review and adjust design, drawings, schedules and documents, if necessary, to remain within budget.
8. Assist in pricing, documentation and tender evaluation as required when the detailed services for these activities are provided by others.

The following financial administration services form part of the normal services except as described in clause 3.2.1.3:
9. Review and adjust cost estimates.
10. Formulate the procurement strategy for contractors or assist the principal agent or principal consultant where relevant.
11. Prepare documentation for contractor procurement.
12. Review designs, drawings and schedules for compliance with approved budget.
13. Call for tenders and/or negotiation of prices and/or assist the principal agent or principal consultant or quantity surveyor where relevant.
14. Evaluate tenders.
15. Prepare contract documentation for signature.

Deliverables will typically include:

a) specifications
b) services co-ordination
c) working drawings
d) budget construction cost, if part of normal services
e) tender documentation, if part of normal services
f) tender evaluation report, if part of normal services
g) tender recommendations, if part of normal services
h) priced contract documentation, if part of normal services.

3.2.5 Stage 5 – Contract Administration and Inspection

Defined as: Manage, administer and monitor the construction contracts and processes including preparation and coordination of procedures and documentation to facilitate practical completion of the works.

1. Attend site handover.
2. Issue construction documentation in accordance with the documentation schedule including, in the case of structural engineering, reinforcing bending schedules and detailing, and specifications of structural steel sections and connections.
3. Carry out contract administration procedures in terms of the contract.
4. Attend fortnightly site, technical and progress meetings.
5. Inspect the works for conformity to contract documentation as described under clause 3.3.2 and as agreed with the client. If the Level of Construction Monitoring is not defined in the
Agreement, Level 1 will apply as described in clause 3.3.2 with an average frequency of one visit to site every two weeks for the duration of the works.

6. Review the outputs of quality assurance procedures and advise the contractor and client on adequacy and need for additional controls, inspections and testing.

7. Assist in the resolution of contractual claims by the contractor.

8. Clarify details and descriptions during construction as required.

9. Witness and review all tests and mock-ups carried out on site.

10. Check and approve contractor drawings for compliance with contract documents.

11. Update and issue drawings register.

12. Issue contract instructions as and when required.

13. Review and comment on operation and maintenance manuals, guarantee certificates and warranties.

14. Inspect the works and issue practical completion and completion certificates and defects lists as appropriate.

15. Arrange for the delivery of all test certificates, including any Certificates of Compliance, statutory and other approvals, record drawings and operating manuals.

The following financial administration services form part of the normal services except as described in clause 3.2.1.3:

16. Prepare schedules of predicted cash flow.

17. Prepare pro-active cost estimates for proposed variations for client decision-making.

18. Adjudicate and resolve financial claims by contractors.

19. Establish and maintain a financial control system.

20. Prepare valuations for payment certificates to be issued by the principal agent.

Deliverables will typically include:

a) schedules of predicted cash flow, if part of normal services.

b) construction documentation
c) drawing register
d) cost estimates for proposed variations, if part of normal services.
e) contract instructions
f) financial control reports, if part of normal services.
g) valuations for payment certificates, if part of normal services.
h) progressive and draft final accounts, if part of normal services.

i) completion certificates and defects lists

j) all statutory certification and certificates of compliance as required by the local and other statutory authorities and as relevant.

3.2.6 Stage 6 – Close-Out

Defined as: Fulfil and complete the project close-out, including necessary documentation to facilitate effective completion, handover and operation of the project.

1. Inspect and verify the rectification of defects.
2. Prepare and/or procure operations and maintenance manuals, guarantees and warranties.
3. Prepare and/or procure as-built drawings and documentation.
4. Issue works and final completion certificates.

The following financial administration services form part of the normal services except as described in clause 3.2.1.3:

5. Receive, comment and approve relevant payment valuations.
6. Conclude the final accounts where relevant.

Deliverables will typically include:

a) valuations for payment certificates, if part of normal services.
b) works and final completion lists
c) operation and maintenance manuals, guarantees and warranties as relevant.
d) as-built drawings and documentation
e) final accounts, if part of normal services.

3.3 ADDITIONAL SERVICES

The following services do not form part of, and are additional to, the normal services provided by the consulting engineer in terms of clause 3.2, unless specifically agreed otherwise between the consulting engineer and the client. The agreement on the scope of services and remuneration must be in writing and should, if at all possible, be concluded before the services are performed.
3.3.1 General

1. Where the project brief, including defining the scope of work, the cost, timeframe and scope of services have not been provided by the client or through previous investigations and reports in sufficient detail to determine the scope, timing and cost of the services with reasonable accuracy, and where these services are performed by the consulting engineer as part of a separate initial feasibility, planning or similar study in terms of clause 3.1, then such services related to defining the scope of work and scope of services are regarded as additional services normally paid for on a time and cost basis.

2. Enquiries not directly concerned with the works and its subsequent utilisation.

3. Valuation for purchase, sale or leasing of plant, equipment, material, systems, land or buildings or arranging for such valuation.

4. Making arrangements for way leaves, servitudes or expropriations.

5. Negotiating and arranging for the provision or diversion of services and or infrastructure not forming part of the works.

6. Additional work in obtaining formal approval from the appropriate statutory authorities, including the making of such revisions as may be required as a result of decisions of such authorities arising out of changes in policy, undue delay, or other causes beyond the consulting engineer's control.

7. Additional work related to monitoring as required by any government departments or authorities to facilitate regulatory approvals and certification (e.g. Mines Health and Safety Act, 29 of 1996).

8. Topographical and environmental surveys, analyses, tests and site or foundation or other investigations, model tests, laboratory tests and analyses carried out on behalf of the client.

9. Setting out or staking out the works and indicating any boundary beacons and other reference marks.

10. Preparation of drawings for manufacture and installation or detailed checking of such for erection or installation fit.

11. Detailed inspection, reviewing and checking of designs and drawings not prepared by the consulting engineer and submitted by any contractor, or potential contractor, as alternative to those embodied in tender or similar documents prepared by the consulting engineer.

12. Inspection and testing, other than on site, of materials and plant, including inspection and testing during manufacture.
13. Preparing and setting out particulars and calculations in a form required by any relevant statutory authority or any other authority having jurisdiction over the project.

14. Abnormal additional services by, or costs incurred by, the consulting engineer due to the failure of a contractor or others to perform their required duties adequately and on time, for example:
   a) When the works Contract is extended beyond the awarded contract period due to poor contractor performance or any other unforeseen circumstances beyond the control of the consulting engineer, attendance at meetings and related inspections are considered as additional services. Alternatively, the portion of the fee due for Stage 5, Contract Administration and Inspection, is adjusted pro-rata to the extended duration versus the originally expected duration.
   b) Suspension and/or termination of contracts and reappointment of contractors, if applicable.
   c) Where more frequent inspections are required due to poor contractor performance or other extraneous factors beyond the control of the consulting engineer, these are normally considered to be additional services.
   d) Dealing with excessive, unreasonable and spurious claims by the Contractor.
   e) Late issue of information, late decisions and instructions and payment delays by the client and/or other consultants.

15. Executing or arranging for the monitoring and adjustment of the works, after final handover and completion of construction and commissioning, to optimise or maintain proper functioning of any process or system.

16. Investigating or reporting on tariffs or charges leviable by or to the client.

17. Advance ordering or reservation of materials and obtaining of licences and permits.

18. Preparing detailed operating, operation and maintenance manuals.

19. Preparing a record drawing or drawings related to designs done by others or related to alterations to existing works.

20. Additional services, duties and/or work resulting from project scope changes, alterations and/or instructions by the client, or his/her duly authorised agents, requiring the consulting engineer to advise upon, review, adapt and/or alter his/her completed designs and/or any other documentation and/or change the scope of his/her services and/or duties. Such additional services are subject to agreement in writing between the consulting engineer and the client prior to the performance thereof.
21. Work, and/or services related to targeted procurement of contractors and subcontractors, that could entail, but is not necessarily limited to, any or all of the following:
   a) Incorporation of any targeted participation goals, the measuring of key participation indicators.
   b) The selection, appointment and administration of participating contractors and subcontractors.
   c) Auditing compliance to the above by any contractors and/or professional consultant.
22. Exceptional arrangements, communication, facilitation and agreements with any stakeholders other than the client and contractors appointed for the works for which the consulting engineer provides services.
23. Any other additional services, of whatever nature, specifically agreed to in writing between the consulting engineer and the client.
24. Software compliancy: where Building Information Modelling (BIM) or similar client specified technology is a project requirement the additional effort over conventional projects in order to meet client requirements is regarded as an additional service. In the case of BIM compliance this may involve the appointment of a BIM manager, and the preparation and approval by the client of the BIM Execution Plan to set up the project to be fully BIM compliant, other client specified technology may also result in additional work.
25. Condition assessment of existing structures and infrastructure or forensic investigations into defects of buildings and structures.

3.3.2 Construction monitoring

Quality assurance during construction refers to the engineering activities that are implemented to reduce the risk of non-conformance of the construction processes. This is achieved through a combination of the quality control processes that are put in place by the contractor, who carries the ultimate responsibility for quality and conformance to the contract, in order to control its outputs, and the inspection and acceptance testing that is carried out by the consulting engineer to confirm conformance prior to certification. This means that the client and consulting engineer must agree a satisfactory arrangement in respect of construction monitoring that suits the type of work, the project location and the duration of the critical aspects of the works. Disagreement regarding the required level of construction monitoring should not be taken lightly and the parties should carefully consider the consequences of non-compliance and related responsibilities, bearing in mind that the consulting
engineer has a duty of care, while the client should aim to reduce risk and ensure quality and minimise life-cycle costs.

The level of construction monitoring and the frequency and duration of the site visits must be agreed with the client prior to commencement of the works and recorded in the Agreement. The level of construction monitoring and activities related to the quality assurance plan may change during the course of the works to reduce quality related risks. This will require an amendment of the Agreement.

Aspects that need to be considered when determining the degree to which additional construction monitoring services are required are:

a) the type of work
b) the discipline of the work (civil, structural, mechanical, electrical etc)
c) the competency of the contractor and its related quality control system
d) the speed with which critical elements of the work are covered
e) the consequences of non-compliance
f) the timing and ease of subsequent detection and rectification of non-compliance.

Arising from the above, three levels of construction monitoring may be defined and described as follows:

1. Level 1: Periodic Construction Monitoring

The consulting engineer’s staff must:

a) subject to the note below, visit the works at a frequency agreed with the client or at an on-call basis at a notice time agreed with the contractor and the client, with extra visits for works completion inspections, provision of design/technical clarifications and inspections for works defects lists. The frequency and duration of site visits must be agreed in writing between the client and between the client and the consulting engineer prior to commencement of the services
b) review random samples of material and work procedures, for conformity to contract documentation, and review random samples of important completed work prior to covering up where possible, or on completion, as appropriate.
Guideline Scope of Services and Professional Fees
(Scope of Services and Tariff of Fees for Persons Registered in terms of the Engineering Profession Act, 46 of 2000)

Compiler: MB Mtshali
Approving Officer: EL Nxumalo
Next Review Date: 01/04/2023

Note: Visits at an average frequency of one visit every two weeks over the duration of the project are part of the normal services and no additional payments are applicable. Where Level 1 construction monitoring is applied on a project and, for reasons beyond the control of the consulting engineer, additional site visits in excess of the frequency initially agreed with the client or are on-call basis, these must be undertaken by the consulting engineer after agreement with the client and will be regarded as an additional service for which payment must be made in accordance with clause 4.3.2.

Level 1 construction monitoring is considered to be a basic level of service and is only suitable for the most simple, routine projects where regular inspections are not required. The client carries the risk associated with Level 1 construction monitoring because the consulting engineer is often unable to witness or inspect work prior to its being covered up and is not liable for hidden defects. On any project where a significant portion of the work is rapidly covered, such as projects involving underground services and building projects like secondary healthcare, tourism and leisure, industrial, commercial, retail and office buildings with complex electrical and mechanical works, Level 2 or Level 3 construction monitoring is required to offset risks.

2. Level 2: Part-time Construction Monitoring

The consulting engineer’s staff, or part-time construction monitoring staff must:

a) regularly visit the site at a frequency that may vary during the course of the project, and such visits may be daily or weekly, according to the project demands. The frequency and duration of site visits must be agreed in writing between the client and the consulting engineer prior to commencement of the services

b) review regular samples of materials and work procedures, for conformity to contract documentation, provide design/ technical clarifications where required and review regular samples of important completed work prior to covering up, or on completion, as appropriate

c) where the consulting engineer is the sole professional service provider or principal agent, carry out such administration of the project as is necessary on behalf of the client.

Level 2 Construction Monitoring is an additional service for which the consulting engineer must be paid as described in clause 4.3.3(b).
3. Level 3: Full-time Construction Monitoring

The full-time construction monitoring staff must:

a) maintain a full-time presence on site to constantly review samples of materials and work procedures, for conformity to contract documentation, provide design/technical clarifications and review completed work prior to covering up, or on completion, as appropriate

b) assist with the preparation of as-built records and drawings to the extent required in the agreement with the client

c) where the consulting engineer is the sole professional service provider or principal agent, carry out such administration of the project as is necessary on behalf of the client

Level 3 Construction Monitoring is an additional service for which the consulting engineer must be paid as described in clause 4.3.2.

Most engineering work typically requires at least Level 2 monitoring to enable the engineer to inspect work prior to its being covered up. Examples may include witnessing material and equipment preparation, the position of reinforcing steel and services such as electrical conduits and sleeves prior to pouring concrete, underground installations or installations above false ceilings, in walls, under floors, etc. The consulting engineer may also require acceptance inspection and testing of various elements on a regular basis depending on the quality controls instituted by the contractor as part of the quality assurance plan. Level 2 construction monitoring does not allow for a full-time presence on site and as a result the consulting engineer and construction monitoring staff are unable to witness/inspect all work prior to its being covered up.

In the case of most civil works where all materials and elements are generally regarded as being critical, and are covered on a daily basis, work is monitored on a continuous basis for the duration of the works and Level 3 monitoring usually applies. This level is also applied to the structural works that are included in such projects.

In some instances, staff members are made available by the client to assist in construction monitoring, in which cases, these persons should report to, and take instructions from, the consulting engineer or an authorised representative of the consulting engineer to avoid mixed messages being passed to the contractor.
3.3.3 Quality assurance system

The requirement by the client for a formal quality management system or quality assurance services to be applied to the project, over and above the construction monitoring services described in clause 3.3.2, is an addition to normal services provided by the consulting engineer and must be specifically defined and separately agreed in writing prior to commencement thereof.

3.3.4 Lead consulting engineer

If the client requires the consulting engineer to assume the leadership of a joint venture, consortium or team of consulting engineers of the same discipline, which is prescribed or requested by the client, this will be regarded as an additional service which may include the following:

1. Responsibility for the overall administration of all sections of the services, including those portions of the services, which fall within the ambit of the other consulting engineers.
2. Responsibility for the overall co-ordination, programming of design and financial control of all the works included in the services.
3. Processing certificates or recommendations for payment of contractors.

3.3.5 Engineering management services (principal consultant)

Should the client require the consulting engineer to undertake duties of an engineering management nature on behalf of the client, the additional services will include the following:

Stage 1 Services – Inception

1. Facilitate development of a clear project brief.
2. Establish the procurement policy for the project.
3. Assist the client in the procurement of necessary and appropriate other consultants including the clear definition of their roles and responsibilities.
4. Establish, in conjunction with the client, other consultants and all relevant authorities, the site characteristics, rights and constraints for the proper design of the intended project.
5. Define the consultant's scope of work and services.
6. Conclude the terms of the agreement with the client.
7. Facilitate a schedule of the required consents and approvals.
8. Prepare, co-ordinate and monitor a project initiation programme.
9. Facilitate client approval of all Stage 1 documentation.

**Typical deliverables:**

- a) Project brief
- b) Agreed scope of work
- c) Agreed services
- d) Project procurement policy
- e) Signed agreements
- f) Integrated schedule of consents and approvals
- g) Project initiation programme
- h) Record of all meetings.

**Stage 2 services – Concept and Viability**

1. Assist the client to procure the other consultants.
2. Advise the client on the requirement to appoint a health and safety consultant.
3. Communicate the project brief to the other consultants and monitor the development of the concept and viability.
4. Agree format and procedures for cost control and reporting by the other consultants.
5. Prepare a documentation programme and indicative construction programme
6. Manage and integrate the concept and viability documentation for presentation to the client for approval.
7. Facilitate approval of the concept and viability by the client.
8. Facilitate approval of the concept and viability by statutory authorities.

**Typical deliverables:**

- a) Signed consultant/client agreements
- b) Indicative documentation programme and construction programme
- c) Approval by the client to proceed to Stage 3.

**Stage 3 Services – Design Development**

1. Agree and implement communication processes and procedures for the design development of the project.
2. Assist the client to procure the necessary other consultants including the clear definition of their roles and responsibilities.

3. Prepare, co-ordinate, agree and monitor a detailed design and documentation programme.

4. Conduct and record consultants’ and management meetings.

5. Facilitate input required by health and safety consultant.

6. Facilitate design reviews for compliance and cost control.

7. Facilitate timeous technical co-ordination.

8. Facilitate client approval of all Stage 3 documentation.

Typical deliverables:

a) Additional signed client/consultant agreements
b) Documentation programme
c) Record of all meetings
d) Approval by the client to proceed to Stage 4.

Stage 4 services – Documentation and Procurement

1. Recommend and agree procurement strategy for contractors, subcontractors and suppliers with the client and the other consultants.

2. Prepare and agree the procurement programme.

3. Advise the client, in conjunction with the other consultants, on the appropriate insurance.

4. Co-ordinate and monitor preparation of procurement documentation by consultants in accordance with the project procurement programme.

5. Manage procurement process and recommend contractors for approval by the client.

6. Agree the format and procedures for monitoring and control by the quantity surveyor of the cost of the works.

7. Co-ordinate and assemble the contract documentation for signature.

Typical deliverables:

a) Procurement programme
b) Tender/contract conditions
c) Record of all meetings
d) Obtain approval by the client of tender recommendation(s)
e) Contract documentation for signature.
Stage 5 services – Contract Administration and Inspection

1. Arrange site handover to the contractor.
2. Establish construction documentation issue process.
3. Agree and monitor issue and distribution of construction documentation.
4. Instruct the contractor on behalf of the client to appoint subcontractors.
5. Conduct and record regular site meetings.
6. Monitor, review and approve the preparation of the construction programme by the contractor.
7. Regularly monitor performance of the contractor against the construction programme.
8. Adjudicate entitlements that arise from changes required to the construction programme.
9. Receive, co-ordinate and monitor approval of all contract documentation provided by contractors.
10. Agree quality assurance procedures and monitor implementation thereof by the other consultants and the contractors.
11. Monitor preparation and auditing of the contractor’s health and safety plan and approval thereof by the health and safety consultant.
12. Monitor preparation of the environmental management plan by the consultant.
13. Establish procedures for monitoring scope and cost variations.
14. Monitor, review, approve and issue certificates.
15. Receive, review and adjudicate any contractual claims.
16. Monitor preparation of financial control reports by the other consultants.
17. Prepare and submit progress reports.
18. Co-ordinate, monitor and issue practical completion lists and the certificate of practical completion.
19. Facilitate and expedite receipt of the occupation certificate where relevant.

Typical deliverables:

a) Signed contracts
b) Approved construction programme
c) Construction documentation
d) Payment certificates
e) Progress reports
f) Record of meetings
g) Certificates of practical completion.

Stage 6 services – Close-Out

1. Co-ordinate and monitor rectification of defects.
2. Manage procurement of operation and maintenance manuals, guarantees and warranties.
3. Manage preparation of as-built drawings and documentation.
4. Manage procurement of outstanding statutory certificates.
5. Monitor, review and issue payment certificates.
7. Manage agreement of final accounts.
8. Prepare and present the project close-out report.

Typical deliverables:

a) Completion certificates
b) Record of necessary meetings
c) Project close-out report.

3.3.6 Dispute resolution, litigation proceedings and similar services

Where the client requires the consulting engineer to, on his or her behalf, perform the services listed hereunder or similar work, the extent thereof and remuneration are subject to agreement between the client and the consulting engineer:

1. Dealing with matters of law, obtaining parliamentary or other statutory approval, licenses or permits.
2. Assisting with or participating in contemplated or actual mediation, adjudication, arbitration or litigation proceedings.
3. Officiating at or attending courts and commissions of enquiry, select committees and similar bodies convened by statute, regulation or decree.

3.3.7 Principal agent of the client

Subject to Clause 3.2.1(2), when a consulting engineer is, in addition to his normal functions as consulting engineer, appointed as the client’s principal agent for the purposes of procurement
and construction on a multi-disciplinary project, the consulting engineer is also responsible for the following:

**Stage 3 services – Design Development**

1. Prepare, co-ordinate, agree and monitor a detailed design and documentation programme.

Typical deliverables:

a) Detailed design and documentation programme.

**Stage 4 services – Documentation and Procurement**

1. Recommend and agree procurement strategy for contractors, subcontractors and suppliers with the client and the other consultants.
2. Prepare and agree the procurement programme.
3. Advise the client, in conjunction with the other consultants on appropriate insurance.
4. Manage procurement process and recommend contractors for approval by the client.
5. Agree the format and procedures for monitoring and control by the quantity surveyor and/or other consultants of the cost of the works.
6. Co-ordinate and assemble the contract documentation for signature.

Typical deliverables:

a) Procurement programme
b) Tender/contract conditions
c) Contract documentation for signature.

**Stage 5 services – Construction Administration**

1. Arrange site handover to the contractor.
2. Establish construction documentation issue process.
3. Agree and monitor issue and distribution of construction documentation.
4. Instruct the contractor, on behalf of the client, to appoint subcontractors.
5. Conduct and record regular site meetings.
6. Review, approve and monitor the preparation of the construction programme by the contractor.
7. Regularly monitor performance of the contractor against the construction programme.
8. Adjudicate entitlements that arise from changes required to the construction programme.
9. Receive, co-ordinate and monitor approval of all contract documentation provided by contractors.
10. Agree quality assurance procedures and monitor implementation thereof by the other consultants and the contractors.
11. Monitor preparation and auditing of the contractor’s health and safety plan, and approval thereof, by the health and safety consultant.
12. Monitor preparation of the environmental management plan by the environmental consultant.
13. Establish procedures for monitoring scope and cost variations.
14. Monitor, review, approve and issue certificates.
15. Receive, review and adjudicate any contractual claims.
16. Monitor preparation of financial control reports by the other consultants.
17. Prepare and submit progress reports.
18. Coordinate, monitor and issue practical completion lists and the certificate of practical completion.

**Typical deliverables:**

a) Signed contracts
b) Approved construction programme
c) Construction documentation
d) Payment certificates
e) Progress reports
f) Record of meetings
g) Certificates of practical completion
h) Facilitate and expedite receipt of occupation certificates.

**Stage 6 services – Close-Out**

1. Co-ordinate and monitor rectification of defects.
2. Manage procurement of operations and maintenance manuals, guarantees and warranties.
3. Manage preparation of as-built drawings and documentation.
4. Manage procurement of outstanding statutory certificates.
5. Monitor, review and issue payment certificates.
7. Manage agreement of final accounts.
8. Prepare and present the project close-out report.

Typical deliverables:

a) Completion certificates
b) Record of necessary meetings
c) Project close-out report.
4 GUIDELINE FEES

4.1 GENERAL

4.1.1 Introduction

The recommended method for the procurement of a consulting engineer is through a selection process based either on direct negotiation, or via a competitive bidding process where proven competence, qualifications, resources, experience, preferencing and developmental criteria are the primary selection factors and price is a secondary factor. During this process the procuring organisation will receive offers with widely ranging scope and related costs or prices. The range of prices that will be received is largely a function of the definition and perception of the scope of work and related services that are required.

The cost of consulting engineering services only constitutes approximately 1-2% of the total life-cycle costs of the facility being designed. The client needs to be aware that professional fees that are too low can lead to:

1. Consultants using inexperienced staff on projects, which compromises the quality of the output
2. Consultants not completing the project, resulting in time and cost delays for client
3. Consultants being forced to take short cuts in order to reduce expenditure, resulting in reduced project quality and costs
4. Significantly increased costs of the works and long-term operations and maintenance costs that will likely overshadow any savings made in the cost of the professional services.

4.1.2 Risk assessment

The guidelines described in this document for the determination of a fee are based on processes and values which have been in use for many years and which have proved to be fair to all parties. The fee should be arrived at by applying these guidelines and agreeing on a fee as a simple percentage of the cost of the works, or as a lump sum, or on a time and cost basis.

The client and the consulting engineer may use any other method for determining the fee, including pricing the services from first principles, either to allow for competitive pricing, or for any other reason. In such instances the client must carry out a proper risk assessment of the offer by the consulting engineer.
engineer in order to determine its acceptability. The risk assessment should, as a minimum, include an analysis of the following:

1. Comparison of the fee offered with a fee based on the guidelines described in this document.
2. Services offered as well as services excluded which may become additional services
3. Numbers, qualifications and experience of staff to be employed on the project
4. Firm’s resources
5. Firm’s experience with similar projects
6. Compliance with client preferencing and developmental criteria
7. Any other criteria which may impact on the consulting engineer’s ability to perform the services in the manner required by the client.

4.1.3 Risk Management

While the guidelines support responsible competitive bidding where price and quality are the key determining factors, risk management should be the overriding consideration. The practice of procuring consulting engineering services on the basis of the magnitude of a financial discount on published fee tables, or fees determined by any other party, is not supported and is counterproductive to good engineering and life-cycle costs. The practice is contrary to all accepted best practice methods of competitive tendering, and, because discounts are typically determined on an arbitrary basis without any consideration of actual costs, fee discounting eventually results in declining standards of quality and service which are the cornerstones of the engineering profession. Reckless fee discounting has a significant negative impact on the industry and poses a serious threat to infrastructure development in the country.

4.1.4 Influencing factors

While the tables of fees contained in this guideline can be applied to many projects, the factors that influence the fees to be paid for consulting engineering services on a project are complex and depend on a number of contributing factors. The contributing factors that should be taken into account may include, among others, all or any of the following:

1. Project complexity: Projects may range from relatively simple projects where the designs are based on well-established common practices to more complex projects where the works call for the application of new, unusual or untried techniques, designs, systems or applications.
2. Monetary value of the works: This may range from a situation where the value of the work is very high relative to the services being performed to a project where the value of the works is abnormally low relative to the services required from the consulting engineer.

3. Time duration: This may involve projects where the works are executed over appreciably shorter or longer periods than would normally be expected.

4. Level of responsibility, liability and risk: These may range from relatively low levels of responsibility and/or risks to projects with unusually high responsibilities and/or risks that are expected to be carried by the consulting engineer.

5. Level of expertise, qualifications, skills and experience: Some works do not require a high degree of expertise while other works may require more specialised expertise or substantial skills and experience that cost more to develop and retain.

6. Level of technology required and changes in technology that may influence the costs of the services provided.

7. Whether aspects related to labour intensive works need to be considered in the design.

8. Level of effort: Some projects do not call for substantial effort as the works can be designed without extensive investigations or field measurements while others may call for unusually high effort on the part of the consulting engineer because of, for example, research required or integration with existing works or repairs to existing infrastructure where the status quo needs to be investigated in considerable detail and these need to be accommodated within the design.

9. Potential value added: In some instances, the design, no matter how sophisticated will not add much value to the overall project while in other cases greater design optimisation can lead to considerable savings in capital, maintenance or operations costs, or add value to the final project.

10. Client requirements: Some clients have relatively few requirements and/or many standard details and the consulting engineer's designs are accepted at face value. Other clients require considerable details to be investigated during design development to satisfy their own, often complex, internal processes.

11. Project definition: In some projects, the design concept and scope are self-evident and requires little further investigation or analysis of options, while in other projects, the design development requires extensive analysis and testing of various options.
Combinations of one or more of the above factors may result in a substantial adjustment of the fee that is required to fairly compensate the consulting engineer and this adjustment factor should be negotiated in good faith by both parties.

4.1.5 Application of the fee guidelines

1. The client must remunerate the consulting engineer, for the services performed, on the basis of clauses 4.2 to 4.5 or as stated in the Agreement.

2. The guideline professional fees described in this guideline apply in respect of the services set out in clause 3.

3. The client must reimburse the consulting engineer for all expenses and costs incurred in terms of clause 4.5 in performing the services, irrespective of whether fees are charged in terms of clauses 4.2, 4.3 or 4.4, as well as for all costs incurred on behalf, and with the approval, of the client.

4. Agreement on any method of adjustment of, or special fees, should be reached at the time of the consulting engineer’s engagement or as soon after as circumstances warrant, such as is practically possible, but in all cases, prior to the consulting engineer performing services that may be affected.

5. The fee is determined on the information provided at the time of procurement, particularly in respect of the scope of work, scope of services, works budget and expected project duration. Any subsequent changes, including unforeseen changes to the project situation and engineering effort, and changes to the project costs, are regarded as a trigger for an adjustment of the fee.

6. The fee may be expressed as a lump sum, in which case, the amount will be subject to adjustment where the final cost of the works varies by more than 15% from the value on which the fee is determined.

7. For certain project types the scope of work may include full services for some elements of the work and limited services for other elements. For example, in some situations the consulting engineer may be asked to provide advice, design review and construction monitoring related to elements designed and detailed by others. The fees for such limited services are subject to agreement between the client and consulting engineer and may be determined on the basis of time and cost or by adding a pro-rata portion of between 15% and 100% of the cost of these elements, depending on the work involved, the degree of responsibility, and related liabilities that could accrue. This is explained in more detail in clauses 4.1.5.8 and 4.1.5.9 below.
8. Subject to 4.1.5.9 below, where the consulting engineer is appointed as the competent person in terms of the National Building Regulations and SANS 10400 on building projects, the consulting engineer is entitled to a full fee for all elements of the work where he/she is appointed as the competent person in terms of SANS 10400 and he/she is required to certify and sign off the design, inspection, and/or completion, regardless of who actually designed and detailed elements of the work. Examples of this include piling, lateral support, load bearing brickwork, precast concrete supports, fire protection, artificial ventilation, stormwater disposal, non-water-borne sanitary disposal or drainage systems.

9. Where the consulting engineer assumes responsibility for the overall structural system of a building in terms of SANS 10400, but certain elements of the structure are designed, inspected and certified by another competent person, he/she has to ensure overall functionality and compatibility of these elements with the primary structure as part of his duties. The consulting engineer may also have to coordinate obtaining separate design certificates for these elements so that the responsibility for the elemental designs will rest with other professionals. The consulting engineer who accepts overall responsibility for the structure is normally remunerated for this limited service by adding 1/3 of the cost of these elements to his/her scope. Examples of this include non-load bearing brickwork, pre-cast slabs, timber or LGSF roof trusses, sheeting and cladding, glazing and facade systems, proprietary timber roof trusses, sundry steelworks subjected to loads such as balustrades, bulkhead supports, etc., and precast concrete decorations, lintels over openings and windows, etc.

10. Where the normal services relate to more than one of the disciplines of consulting engineering contemplated in clauses 4.2.2 to 4.2.9, namely civil, structural, mechanical, electrical or electronic engineering services, a separate fee for services in each discipline should be calculated in accordance with the relevant clause.

11. Where at the instance, and with the consent of the client, the works are undertaken on separate non-contiguous sites, continuity is interrupted or the works are unusually fragmented or constructed as separately documented phases or sections, the fee for normal services is:
   a) the sum of the fees calculated separately for each site, contract, phase or section as if they were separate works; or
   b) a fee agreed to between the client and the consulting engineer and which fee lies between the fee calculated on the total cost of the works and the sum of the fees contemplated in clause (a) above.
12. Although financial administration services are normally part of normal services as described in Clause 3.2, there are instances where these services are excluded and are provided by others, such as quantity surveyors, in which case the fee should be reduced by up to fifteen per cent (15%). In such instances where the consulting engineer is required to assist, then such assistance can be treated as an additional service and the consulting engineer remunerated on a time and cost basis.

13. Where the scope of the work involves alterations to existing facilities with extensive re-use of existing facilities, installations and/or structures, detailed condition assessments and surveys may be required to facilitate good integration of new work with existing work and the percentage fee should be increased by up to twenty five (25) per cent for that portion of the works. The additional fee for alteration work must be applied judiciously and fairly by both parties and must only apply to the altered portion of the works. Where an existing installation, structure or building is simply abandoned and/or demolished and replaced by a new installation, structure or building the adjustment factor should not apply and the consulting engineer must be remunerated on a time and cost basis for any additional services such as site surveys and inspections related to the existing installation, structure or building.

14. Tables 2A to 9A in Clause 4.2 below include a factor to be applied in the case of duplication of works. The factor is only to be applied where designs for a complete unit (such as a complete building or a bridge) can be duplicated and applied to a different project or site without alteration to the drawings and/or specification. If alteration is required to the drawings and/or specifications for different complete units then the duplication factor must be adjusted by written agreement between the client and consulting engineer. No duplication factor is applicable where different drawings and/or specification are required for each unit.

15. The fees for specialist engineering services and studies, including feasibility studies, are calculated separately from the fees for normal services, additional services and expenses and costs, and are normally calculated on a time and cost basis or as a lump sum.

16. The following fees may be claimed monthly or after each stage of services or as agreed between the consulting engineer and the client:
   a) Percentage fees determined on the basis of the cost of the works prevailing at the time of the fee calculation and pro-rata to the completed services, or a portion of the total fee based on completion of the stages along the lines indicated in 4.2.10.
   b) Time based fees applicable when the services were rendered.
   c) Expenses and costs as set out in clause 4.1.5.3 and clause 4.5 may be claimed monthly.
4.2 PERCENTAGE FEES BASED ON COST OF WORK FEES FOR NORMAL SERVICES

4.2.1 Introduction

In Tables 1 to 9 which follow, the fee guidelines consist of the sum of a primary and secondary fee depending on the cost of the works. The calculation method is explained in the following worked examples:

**Example A**

Assume a relatively simple rural road project with an estimated cost of the works of R24 million, then the procedure to calculate the fee using the tables would be:

1. Percentage fee is based on Clause 4.2.2,
2. 
3. 
4. Table 1
5. Cost of the works exceeds R20 000 000 but does not exceed R50 000 000
6. Primary fee = R2 370 000
7. Basic fee = [R2 370 000 + (R24 000 000 – R 20 000 000) x 9,0%] = R2 730 000.
8. Multiplied by a complexity factor of 0.85 from Table 2A for rural roads = R2 320 500.
9. The resultant fee may be expressed as a percentage of R2 320 500 / R24 000 000 = 9,67 %.

**Example B**

Assume a civil engineering project involving some new roadworks as well as alterations to an existing concrete bridge structure and an estimated cost of the works of R110 million, then the procedure to calculate the fee using the tables would be:

1. Percentage fee is based on Clause 4.2.1,
2. 
3. 
4. Table 1
5. Cost of the works exceeds R100 000 000 but does not exceed R600 000 000
6. Primary fee = R9 070 000
Guideline Scope of Services and Professional Fees
(Scope of Services and Tariff of Fees for Persons Registered in terms of the Engineering Profession Act, 46 of 2000)

7. Basic fee = \[R 9\,070\,000 + (R 110\,000\,000 - R 100\,000\,000) \times 7.0\%\] = R 9\,770\,000

8. If it is further assumed that portion of the total works involves reinforced concrete and structural steel work with a value of R 52\,400\,000 (i.e. 40\% of the total works value), then, from Clause 4.2.1, Table 2, the additional design fee on the reinforced concrete and structural steel is calculated as follows:

9. Additional primary fee = R 2\,050\,000

10. Additional design fee for structural work = \[R 2\,050\,000 + (R 52\,400\,000 - R 50\,000\,000) \times 3.0\%\] = R 122\,000

11. Adjustment factor for alterations to existing structure, from Clause 4.2.2, Table 2A is 1.25, only applicable to the fee for the structural work, i.e. \(1.25 \times R 122\,000 = R 265\,250\).

12. The total fee is thus R 9\,770\,000 + R 265\,250 = R 12\,422\,500 which may be expressed as a percentage or as a lump sum or as agreed between the client and the consulting engineer.

Example C

Assume an electrical subcontract on a building project with an estimated cost of the electrical works of R 8 million. The consulting engineer is responsible for all financial administration services and the project involves a new building, then the procedure to calculate the fee using the tables would be:

1. Percentage fee is based on Clause 4.2.8, Table 8

2. Cost of the works exceeds R 2000\,000 but does not exceed R 10\,000\,000

3. Primary fee = R 380\,000

4. Basic fee = \[R 380\,000 + (R 8\,000\,000 - R 2\,000\,000) \times 15.0\%\] = R 1\,280\,000.

5. The resultant fee may be expressed as a percentage of \(R 1\,280\,000 / R 8\,000\,000 = 16.0\%\).

Fee negotiations would typically commence using these starting values and judgement regarding project complexity to arrive at a finally agreed percentage fee. The fee amount to be paid will generally be based upon the final cost of works or any other suitably agreed arrangement.

4.2.2 Civil and structural engineering services pertaining to engineering projects

1. The basic fee for normal services in the disciplines of civil and structural engineering, pertaining to Engineering Projects, is determined from
Table 1 below. The fee is the sum of the primary fee and the secondary fee applicable to the specific cost of the works in respect of which the services were performed on the project excluding feasibility and similar studies described in clause 3.2.1, which is normally reimbursed on a time basis in terms of clause 4.4. Refer to the worked examples in clause 4.2.1.

Table 1: Civil and Structural Engineering Services pertaining to Engineering Projects

<table>
<thead>

</tbody>
</table>

2. The following additional fee is typically applicable to the value of the reinforced concrete and structural steel portions of the works, inclusive of the costs of concrete, reinforcing, formwork, structural steel work and any pro-rata preliminary and general amounts. Where structures of identical design are repeated on the same project, the combined cost is normally cumulated for the determination of the cost of the reinforced concrete and structural steel works. In cases where structures require individual design, a separate additional fee is normally calculated for each structure based on the cost of the reinforced concrete and/or structural steel work for that particular structure. The additional fee is the sum of the primary fee and the secondary fee applicable to the specific cost of the works in respect of which the services were rendered on the project as shown below.
Table 2: Additional design fee on reinforced concrete and structural steel

3. To calculate the fee for railway track work in terms of this item, 50 per cent of the cost of the permanent way materials is normally excluded from the cost of the works in view of the limited design input normally required for these elements, but the full cost of ballast and equipment specially designed by the consultant is normally included in the cost of the works.

4. For normal services relating to a description of the works mentioned in the first column of the following table, the proportion of the basic fee relating to the specific item calculated in terms of clause 4.2.2.1 and 4.2.2.2 is normally multiplied by the category factors mentioned against that description in the second column of the table. In cases more than one of the descriptions below applies, the effective factor will typically be the product of the factors involved. These factors do not apply when fees are a lump sum or on a time basis.

In the case of road works, where the road traverses both rural and urban areas, an adjustment pro-rata to the length of road in rural and urban area is normally made.

In the case of road rehabilitation, a combination of factors applies, depending on the situation of the road (rural or urban), and the category factor for alterations to existing works.

2. For normal services relating to a description of the works mentioned in the first column of Table 9A the proportion of the basic fee relating to the specific item calculated in terms of clause 4.2.9.1 is normally multiplied by the category factor mentioned against that description in the second column of the table. In case more than one of the descriptions below applies, the effective factor will typically be the product of the factors involved.

These factors do not apply when fees are a lump sum or on a time basis

Table 9A: Typical factor by which basic fee is multiplied

4.2.10 Services provided partially or in stages
Table 10 shows typical percentages that are typically used for proportioning the basic fee for normal services over the various stages of the services. The actual percentage used should be adjusted for individual projects through negotiation and depending on the work involved in each stage, the value that can be added in each stage and any commercial considerations that may be applicable:

Where not all the stages of the normal services are provided by the consulting engineer, the fee is, subject to clause 4.2 calculated as a percentage of the total fee calculated in terms of this clause, which percentage is the sum of the percentage points appropriate to each stage as set out in the above table against those stages of the services provided by the consulting engineer, typically plus 10 percentage points.

**4.2.11 Cancellation or abandonment**

Should instructions have been given by the client to the consulting engineer to proceed with any of the stages of services set out in clause 3 and the whole or part of the works is cancelled or abandoned or postponed for a period of more than six months, the consulting engineer must be remunerated for services performed, plus a surcharge of one tenth of the full fee which would have been payable to the consulting engineer had his or her services been completed in terms of the engagement.
4.3 FEES FOR ADDITIONAL SERVICES

The fees for additional services, contemplated in clause 3.3, are agreed to between the client and the consulting engineer as described in clause 4.1 and as set out hereunder.

4.3.1 Basis for the calculation of fees for additional services

Unless otherwise agreed in writing, the fees for additional services contemplated in clauses 3.3.1, 3.3.3 and 3.3.6 are calculated on the basis of time as set out in clause 4.4 and actual costs as set out in 4.5.

4.3.2 Construction monitoring

For the provision of construction monitoring services, as contemplated in clause 3.3.2, the consulting engineer is typically entitled to recover from the client:

1. For Level 3, full time construction monitoring involving monthly site staff costs, the total annual cost of employment of such staff (as described in clause 4.4.4), divided by 12 and multiplied by one of the following:
   a) Case 1: Where payment is only made for actual time on site and site allowances are not paid separately: 2.1 times total cost of employment.
   b) Case 2: Where payment is only made for actual time on site and site allowances are paid separately: 2.0 times total cost of employment.
   c) Case 3: Where payment is made for leave and non-working days and site allowances are paid separately: 1.8 times total cost of employment.

2. For Level 2, part time monitoring staff costs, the amount payable to such staff at the hourly rates contemplated in clause 4.4.

3. For all other expenses and costs incurred as part of construction monitoring services, as set out in clause 4.5.

4.3.3 Lead consulting engineer

For services as lead consulting engineer, as contemplated in clause 3.3.3, the lead consulting engineer is typically entitled to an additional fee of 10 percent (10%) of the total fees payable for the services performed by the joint venture, consortium, or team.

4.3.3 Engineering management services (principal consultant)
For engineering management services or services as the principal consultant, as contemplated in clause 3.3.5, the consulting engineer will typically be remunerated as follows:

1. The basic fee for services in the discipline of engineering management services, including work pertaining to Building Projects, is determined from the table below. The fee is the sum of the primary fee and the secondary fee applicable to the specific cost of the works in respect of which the services were performed on the project.

Table 11: Engineering Management Services (Principal Consultant)

<table>
<thead>
<tr>
<th>Cost of the Works</th>

4.3.4 Principal agent

For services as principal agent of the client, as contemplated in clause 3.3.7, the consulting engineer is typically entitled to an additional fee calculated at one percentage point (1%) of the total cost of the works comprising the project. The consulting engineer is not entitled to any fees for principal agent if he or she is not explicitly appointed as such.
4.4 TIME-BASED FEES

4.4.1 Introduction

Time-based fees are all-inclusive and include allowances for overhead charges incurred by the consulting engineer as part of normal business operations, including the cost of management, as well as payments to administrative, clerical and secretarial staff used to support professional and technical staff in general and not on a specific project only.

Time-based fees are calculated by multiplying the hourly rate contemplated in clause 4.4, which is applicable to the consulting engineer or any other technical staff employed by the consulting engineer, with the actual time spent by such technical staff in performing the services required by the client.

Technical staff include all staff performing work directly related to the execution of the services and does not include any administrative, clerical and secretarial staff who may support professional and technical staff in general and not on a specific project only.

4.4.2 Category of person

To determine the time-based fee rates, the persons concerned are divided into:

1. Category A, in respect of a private consulting engineering firm, means a top practitioner whose expertise and relevant experience is nationally or internationally recognised and who provides advice at a level of specialisation where such advice is recognised as that of an expert.

2. Category B, in respect of a private consulting engineering firm means a partner, a sole proprietor, a director, or a member who, jointly or severally with other partners, co-directors or co-members, bears the risks of the business, or takes responsibility for the projects and related liabilities of the firm and where his/her level of expertise and relevant experience is commensurate with the position, performs work of a conceptual nature in engineering design and development, provides strategic guidance in planning and executing a project and/or carries responsibility for quality management pertaining to a project.

3. Category C, in respect of a private consulting engineering firm means all salaried professional staff with adequate expertise and relevant experience performing work of an engineering nature and who carry the direct technical responsibility for one or more specific activities.
related to a project. A person referred to in Category B may also fall in this category if such person performs work of an engineering nature at this level.

4. Category D, in respect of a private consulting engineering firm means all other salaried technical staff with adequate expertise and relevant experience performing work of an engineering nature with direction and control provided by any person contemplated in categories A, B or C.

4.4.3 Time based fee rates

The time-based fee rates are:

1. Calculated for a person in category -
   a) A and B at 22.00 cents per hour
   b) C at 17.5 cents per hour; and
   c) D at 16.5 cents per hour

   for each R100 or part thereof of the total annual cost of employment of the person concerned, as contemplated in sub-clause (4); or

2. Alternatively may be based on such indicative time based fee rates as are determined from time to time by various bodies such as the Department of Public Service and Administration (DPSA).

3. Provided that in all cases the client and consulting engineer may agree on a more appropriate fee to take account of the specific services to be rendered or expertise to be applied.

4.4.4 Total annual cost of employment

For the purposes of clause 4.4, the total annual cost of employment of a person means the total amount borne by an employer in respect of the employment of such a person per year, calculated at the amounts applicable to such a person at the time when the services are rendered, including:

1. Basic salary or a nominal market-related salary, excluding profit share and asset growth.

2. Fringe benefits not reflected in the basic salary, including:
   a) Normal annual bonus
   b) Employer's contribution to medical aid
   c) Group life insurance premiums borne by the employer
d) Employer's contribution to a pension or provident fund

e) All other benefits or allowances payable in terms of a letter of appointment, including any transportation allowance or company vehicle benefit, telephone and/or computer allowances, etc.

3. Statutory amounts payable, including:

a) Contributions to the Compensation Fund in terms of the Compensation for Occupational Injuries and Diseases Act, 130 of 1993

b) Contributions to unemployment insurance in terms of the Unemployment Insurance Fund Act, 63 of 2001

c) Levies in terms of the Skills Development Levy Act 9 of 1999

d) Recoverable levies to all spheres of government.

4.5 EXPENSES AND COSTS

4.5.1 Subject to clause 4.3.3 a consulting engineer may recover from the client:

1. All expenses actually incurred by the consulting engineer and members of the consulting engineer's staff in performing their services.

2. All other costs incurred on behalf of and with approval of the client, plus a mark-up of 10 per cent.

4.5.2 Recoverable expenses include:

1. Travelling expenses for the conveyance of the consulting engineer or a member of the consulting engineer's staff by means of:

   a) private motor transport, including any parking charges, toll fees and related expenses

   b) a scheduled airline or a train, bus, taxi or hired car; or

   c) non-scheduled or privately owned air transport.

2. Travelling time on the basis of the rate set out in clause 4.4, for all time spent in travelling by the consulting engineer or members of his or her staff is as follows:

   a) When fees are paid on a time basis, all hours spent on travelling are reimbursable.

   b) When fees are paid on a percentage basis, reimbursement for travelling time is for all time spent in travelling minus the first hour per return journey.

3. Accommodation and subsistence expenses incurred by the consulting engineer or a member of his/her staff.
4. Agreed costs of typing, production, copying and binding of contract documents, pre-qualification documents, feasibility reports, preliminary design reports, final reports and manuals, excluding general correspondence, minor reports, contractual reports, progress reports, etc.

5. Expenses on special reproductions, copying, printing, artwork, binding and photography, etc. requested by the client.

4.5.3 Alternatively, a lump sum or percentage of the cost of the works may be determined and agreed between the consulting engineer and the client to cater for all or any of the above.

Costs that shall be recovered under clause 4.5.1.2 above include, but are not limited to:

a) Site traffic surveys  
b) Geotechnical investigations  
c) Sampling and Laboratory testing  
d) Topographical and land surveys  
e) Supply of specific equipment  
f) Specialist sub-consultants  
g) Environmental investigations and studies, and management plans  
h) Institutional service delivery and social consultants  
i) Land acquisitions, expropriation, way leaves and servitudes  
j) Power supply applications.
